

NATIONAL TRANSPLANT PROGRAMME

Transplantation medicine represents a unique field within biomedicine which places our healthcare system among the very best in the world thanks to our extraordinary results. Three healthcare components are key for the success of the National Transplantation Programme: an effective organ donation system, transplantation team excellence, and a modern, national organisation for the management and coordination of the programme.

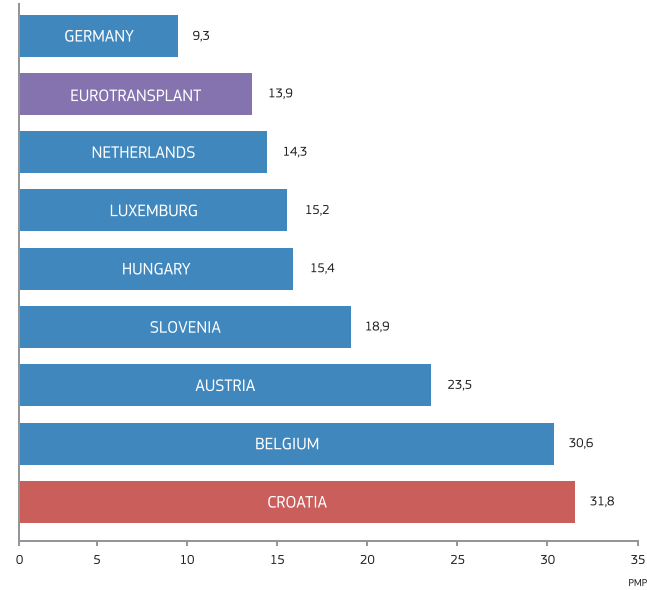

Thanks to the synergy between all three of the components, the Croatian healthcare system has managed, as one of the few in the world, to successfully respond to the global challenge in the field of transplantation medicine - lack of organs for transplantation.

By entering Eurotransplant in 2007, the National Transplantation Programme has implemented an international cooperation component, which added quality and transparency to the programme, thanks to the sophisticated system for organ allocation and exchange.

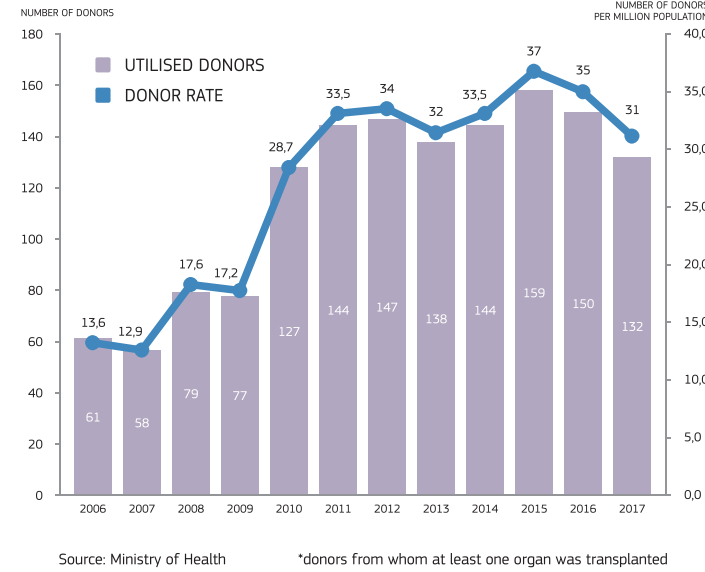

This brochure provides an overview of the activities and results achieved in the area of organ donations and transplants, with special reference to the tenth anniversary of international cooperation and Eurotransplant membership.
