

NUMBER OF TRANSPLANTED ORGANS IN CROATIA
2000-2010

KIDNEY TRANSPLANTS 1990-2010

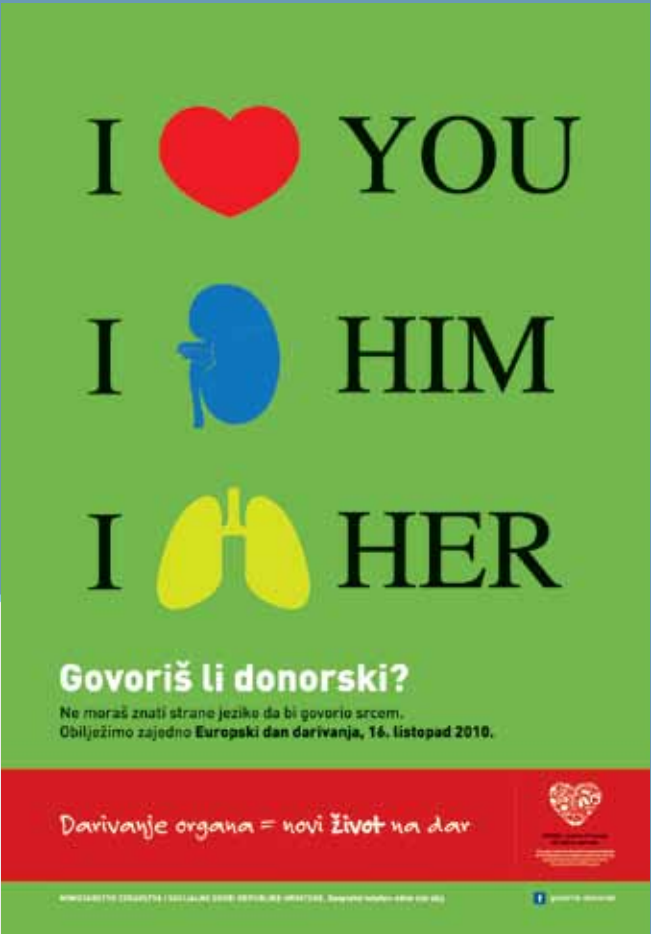

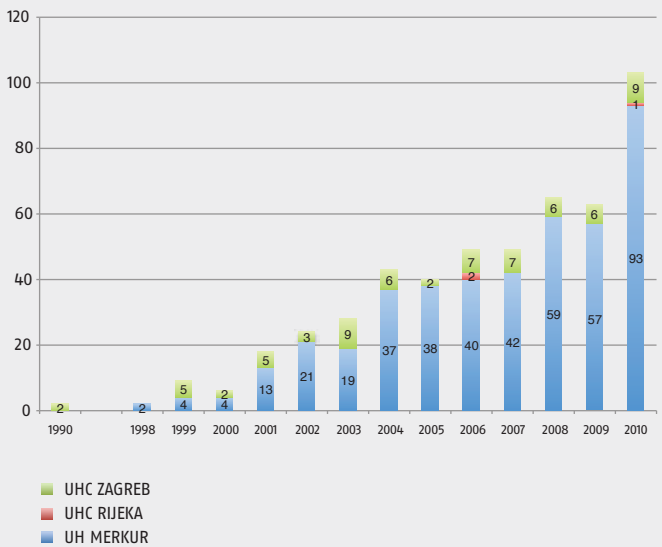

HEART TRANSPLANTS 1998-2010

LIVER TRANSPLANTS 1990-2010

Including liver from multiorgan transplants

CROATIAN
TRANSPLANTATION
PROGRAM IN
YEAR 2010

Annual report

There is no other field in medical sciences that brings together individuals, institutions and organisations in a manner the transplantation medicine does. The need for organ and tissue transplantation has rapidly increased thus increasing the number of patients provided with the best therapy option resulting from organ transplantation.

Year 2010 recorded the highest increase in number of deceased donors, of up to 64,9% and an increased number of transplantations of 54%. In comparison to year 2009, waiting lists were decreased by 19%. Such progress in number of donors and number of transplantations (in total 394 organs transplanted) has positioned Croatia as one of the leading European and World countries; with an overall number of 127 realised deceased donors, i.e. 30 actual and 28 realised donors pmp, Croatia ranks with Spain and Portugal.

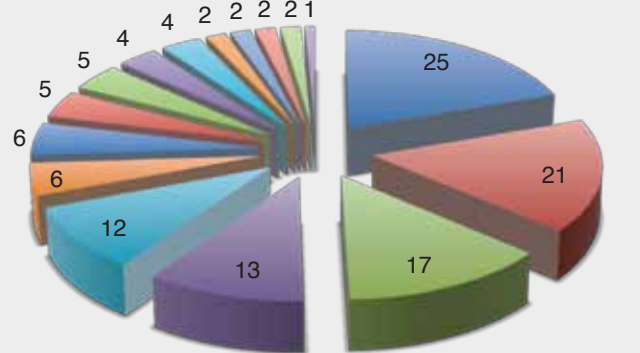

Due to a successful organization model, high donor and transplantation rates, as well as good allocation practise and Eurotransplant membership, today Croatian transplantation medicine places Croatia in the society of highly developed countries worldwide. As such, transplantation medicine definitely represents a unique domain of Croatian medicine and health system which can, seen globally, boast such great result.

"All you can serve for life, sin is buried." John Paul II

NUMBER OF REALISED DONORS PER HOSPITAL 2010

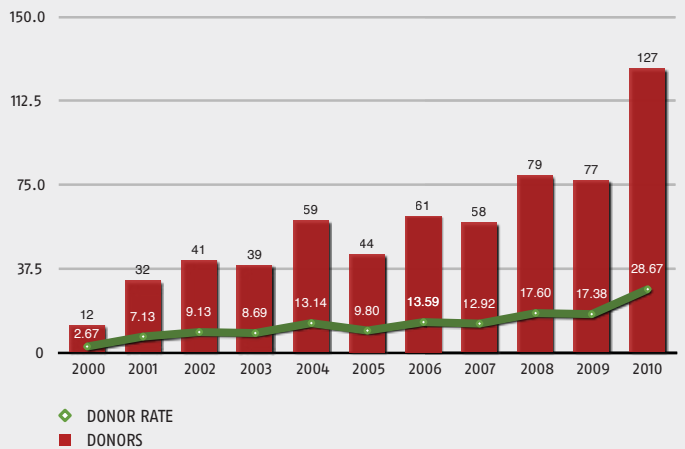

HOSPITALS		DONORS			
UH SESTRE MILOSRDNICE	25	GH SISAK	6	UH SVETI DUH	4
